ON TWITTER, PILOT IS CM SHIVRAJ TRUMPS MODI IN MP

Buried in 900,000 tweets of politicians in MP and Rajasthan are important clues on how the campaign played out and what will follow

The view from the other states

A

Important aspect of Indian politics is Twitter. Politicians tweet, leaders tweet, and the public tweets. This is a powerful tool for in-depth analysis of political sentiments. The tweets can provide insights into public opinion, political strategies, and even predict election outcomes. In the recent Indian elections, Twitter played a significant role.

However, how does one make sense of the vast amount of data generated on Twitter? One approach is to use sentiment analysis tools to analyze the tweets. These tools can help identify the overall sentiment of the tweets, whether positive, negative, or neutral.

Another approach is to use topic modeling to identify the main topics being discussed on Twitter. This can help identify the key issues and debates that are currently dominating the political discourse.

Finally, deep learning can be used to analyze the tone of tweets. This can help identify the emotions behind the tweets and understand the underlying motivations behind political actions.

By combining these approaches, one can gain a deeper understanding of the political landscape and make informed predictions about future events.
